

# The RankBuilder Instant Ranking Formula

“How to Build a Huge Network of Linking  
Power for Any Site...”

[RankBuilder.com](http://RankBuilder.com)

# Introduction

---

Welcome to the RankBuilder “Instant Ranking Formula” which is a very powerful system for building massive link real estate to get any site you want ranking highly in Google.

After you’ve read and put into action the strategies in this report, you’ll be able to do three things:

- Get any new site indexed quickly and backlinks to it automatically – and this happens simultaneously.
- Build a huge link distribution network that you only have to set up once, and you can re-use to drive massive link juice to any site or page you want to get ranked for in the future.
- Leveraging the power of existing link networks to drive even more links on a daily basis.

This report is no-fluff, straight to the point and if you put it to work for you, you will see a significant improvement in your search engine rankings.

So without further ado, I introduce to you the RankBuilder Instant Rankings Formula for top search engine rankings...

If you’re reading this report and want even more SEO strategies, tools and resources, visit the [RankBuilder Blog](#). And remember, my revolutionary new SEO automation suite, RankBuilder launches on September 7.

Stay tuned to the prelaunch blog for more announcements and details.

First, I will be sharing a system we use for getting our sites indexed rapidly, and at the same time creating a distribution network to drop contextual links whenever we need them.

---

# Getting Indexed Quickly & Building Instant Backlinks

---

Today I will be sharing a system we use for getting our sites indexed rapidly, and at the same time creating a distribution network to drop contextual links whenever we need them.

We will be leveraging a couple different sites and services including a new service called Ping.fm and 9 top web 2.0 properties with PR 7 or higher that give us the anchor text of our choosing, plus in context, which are very powerful links.

The first thing we are going to go over is a quick and easy way to get your sites indexed quickly. Any site you put up, you can use this 5 minute process and have your site indexed within hours.

We're going to be using 20 website monitoring/statistics sites. What's cool about these sites is that they automatically create pages on the fly (dynamically) depending on what the URL is. To understand why this process works let's look at an example.

One of these sites is called StatBrain.com –a website statistics monitoring service. Now all you have to do in order to create a page on StatBrain with a link back to your new site is to put this dynamic URL structure into your browser and click go.

The page is automatically generated on statbrain.com and there's a link back to your new site.

Here's the structure:

<http://www.statbrain.com/www.yourdomain.com>

Get more training and SEO tools at the [RankBuilder Blog](#)

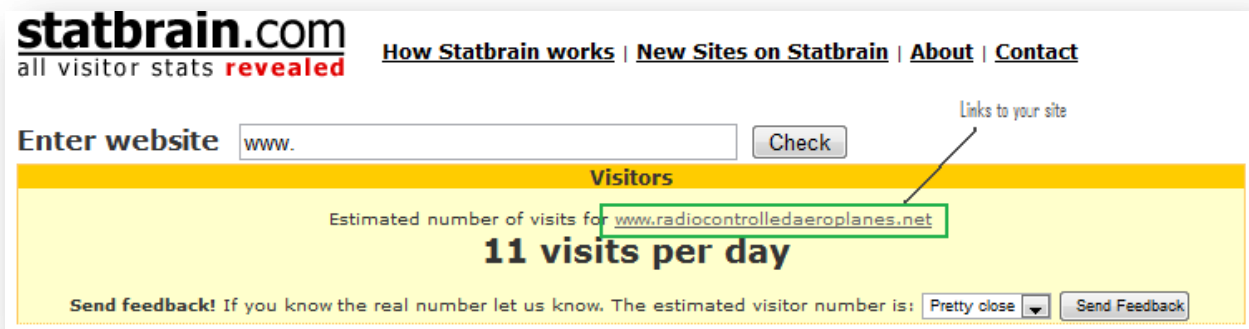

You simply replace “yourdomain.com” with your real site’s domain and enter it into your browser. You will then see a new dynamically generated page for your site.

Major search engines like Google crawl these sites and index these new pages all day long. They pick up the new page on StatBrain, follow the link and then index your site.

Simple stuff. So let’s say we have a new site, radiocontrolledaeroplanes.net and we want to get it indexed. We would simply enter this URL into our browser:

<http://www.statbrain.com/www.radiocontrolledaeroplanes.net>

The result would be a page that looks similar to the following. The page has some other info on it, but what we’re interested in is right here:

The screenshot shows the StatBrain website interface. At the top left is the logo "statbrain.com" with the tagline "all visitor stats revealed". To the right are navigation links: "How Statbrain works", "New Sites on Statbrain", "About", and "Contact". Below the logo is a search bar labeled "Enter website" with a "Check" button. The search bar contains the text "www.". Below the search bar is a yellow banner with the heading "Visitors". Inside the banner, it says "Estimated number of visits for [www.radiocontrolledaeroplanes.net](http://www.radiocontrolledaeroplanes.net)" and displays "11 visits per day" in large, bold text. At the bottom of the banner, there is a "Send feedback!" section with a dropdown menu set to "Pretty close" and a "Send Feedback" button. An arrow points from the text "Links to your site" to the URL in the banner.

There’s a link that goes straight to you site. So, not only do you get a backlink, but Google who is constantly crawling these sites will find this new page, follow that link and index your site.

Doing this just once probably would work, but since we want to be sure, let’s do it about 19 more times at 19 different sites like these.

Get more training and SEO tools at the [RankBuilder Blog](#)

I've provide you the full list of these 20 sites in the Fast Indexer Tool file. If you haven't downloaded the FastIndexer Tool, you can download it [HERE](#).

Here are some examples:

<http://www.websiteoutlook.com/www.yourdomain.com>

<http://www.statbrain.com/www.yourdomain.com>

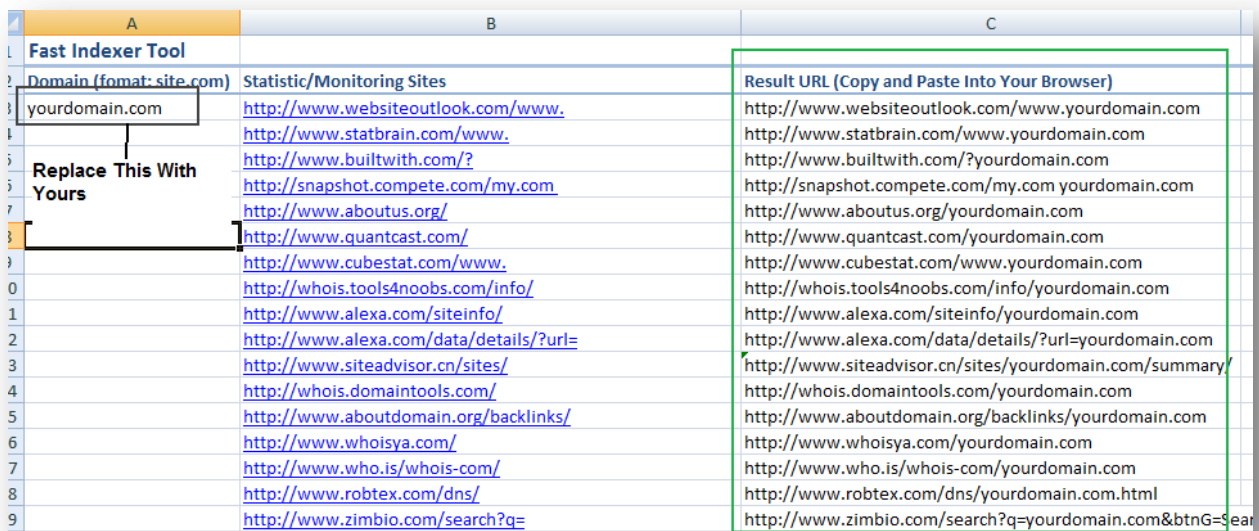

<http://www.builtwith.com/?yourdomain.com>

<http://snapshot.compete.com/yourdomain.com>

[http://searchanalytics.compete.com/site\\_referrals/yourdomain.com](http://searchanalytics.compete.com/site_referrals/yourdomain.com)

The process would be just to simply replace "yourdomain.com" in each one of those in the list of 20 and then paste each one of them into your browser to generate a page with a link back to your site.

Of course that would take a little longer than 5 minutes, so with this training I've included a spreadsheet (for Excel or OpenOffice) that does half of the work for you. Here's what the spreadsheet looks like when you open it:

A	B	C
1	<b>Fast Indexer Tool</b>	
2	Domain (format: site.com)	Statistic/Monitoring Sites

	<a href="http://www.cubestat.com/www.yourdomain.com">http://www.cubestat.com/www.yourdomain.com</a>	<a href="http://www.cubestat.com/www.yourdomain.com">http://www.cubestat.com/www.yourdomain.com</a>
	<a href="http://whois.tools4noobs.com/info/yourdomain.com">http://whois.tools4noobs.com/info/yourdomain.com</a>	<a href="http://whois.tools4noobs.com/info/yourdomain.com">http://whois.tools4noobs.com/info/yourdomain.com</a>
	<a href="http://www.alexa.com/siteinfo/yourdomain.com">http://www.alexa.com/siteinfo/yourdomain.com</a>	<a href="http://www.alexa.com/siteinfo/yourdomain.com">http://www.alexa.com/siteinfo/yourdomain.com</a>
	<a href="http://www.alexa.com/data/details?url=yourdomain.com">http://www.alexa.com/data/details?url=yourdomain.com</a>	<a href="http://www.alexa.com/data/details?url=yourdomain.com">http://www.alexa.com/data/details?url=yourdomain.com</a>
	<a href="http://www.siteadvisor.cn/sites/yourdomain.com/summary/">http://www.siteadvisor.cn/sites/yourdomain.com/summary/</a>	<a href="http://www.siteadvisor.cn/sites/yourdomain.com/summary/">http://www.siteadvisor.cn/sites/yourdomain.com/summary/</a>
	<a href="http://whois.domaintools.com/yourdomain.com">http://whois.domaintools.com/yourdomain.com</a>	<a href="http://whois.domaintools.com/yourdomain.com">http://whois.domaintools.com/yourdomain.com</a>
	<a href="http://www.aboutdomain.org/backlinks/yourdomain.com">http://www.aboutdomain.org/backlinks/yourdomain.com</a>	<a href="http://www.aboutdomain.org/backlinks/yourdomain.com">http://www.aboutdomain.org/backlinks/yourdomain.com</a>
	<a href="http://www.whoisya.com/yourdomain.com">http://www.whoisya.com/yourdomain.com</a>	<a href="http://www.whoisya.com/yourdomain.com">http://www.whoisya.com/yourdomain.com</a>
	<a href="http://www.who.is/whois-com/yourdomain.com">http://www.who.is/whois-com/yourdomain.com</a>	<a href="http://www.who.is/whois-com/yourdomain.com">http://www.who.is/whois-com/yourdomain.com</a>
	<a href="http://www.robtex.com/dns/yourdomain.com.html">http://www.robtex.com/dns/yourdomain.com.html</a>	<a href="http://www.robtex.com/dns/yourdomain.com.html">http://www.robtex.com/dns/yourdomain.com.html</a>
	<a href="http://www.zimbio.com/search?q=yourdomain.com&amp;btnG=Search">http://www.zimbio.com/search?q=yourdomain.com&amp;btnG=Search</a>	<a href="http://www.zimbio.com/search?q=yourdomain.com&amp;btnG=Search">http://www.zimbio.com/search?q=yourdomain.com&amp;btnG=Search</a>

Open the spreadsheet and you will see a cell with yourdomain.com in the first column. Simply replace that with your real domain.

Use that exact format (yourdomain.com) no www or http://, etc. You should see the third column update automatically with all the correct links needed for each of the 20 different sites.

Simply copy and paste those newly generated links into your browser (Firefox, IE, whatever) one after the other. This shouldn't take you more than 2-3 minutes max to do all 20 of them. So in less than 5 minutes you can have 20 sites linking back to you – and these 20 sites are constantly being crawled by the search engine spiders, which is 20 opportunities to get your site followed and indexed.

Do this, and you should have your site indexed within a couple hours, and at most it should take no longer than 24 hours.

That's all there is to it. If you want to take it step further, and make sure your site gets indexed quickly, simply submit your site to Digg.com.

Get more training and SEO tools at the [RankBuilder Blog](#)

Digg has S.E. spiders crawling it all day. After submitting your site it will be shown in the “upcoming” section of Digg. You can almost guarantee you’ll get spidered and indexed.

Now that I’ve shown you sure-fire way to get your sites indexed quickly, it’s time move onto the more powerful stuff...

---

## Contextual Link Distribution Networks

---

### Setting Up a Link Distribution Network

Okay, we’ve learned a super easy way to get our sites indexed, but we want something that we can easily leverage every time we have a new site to get indexed –and have it indexed in minutes rather than a day. And at the same time, instantly get hundreds of backlinks to it on auto pilot.

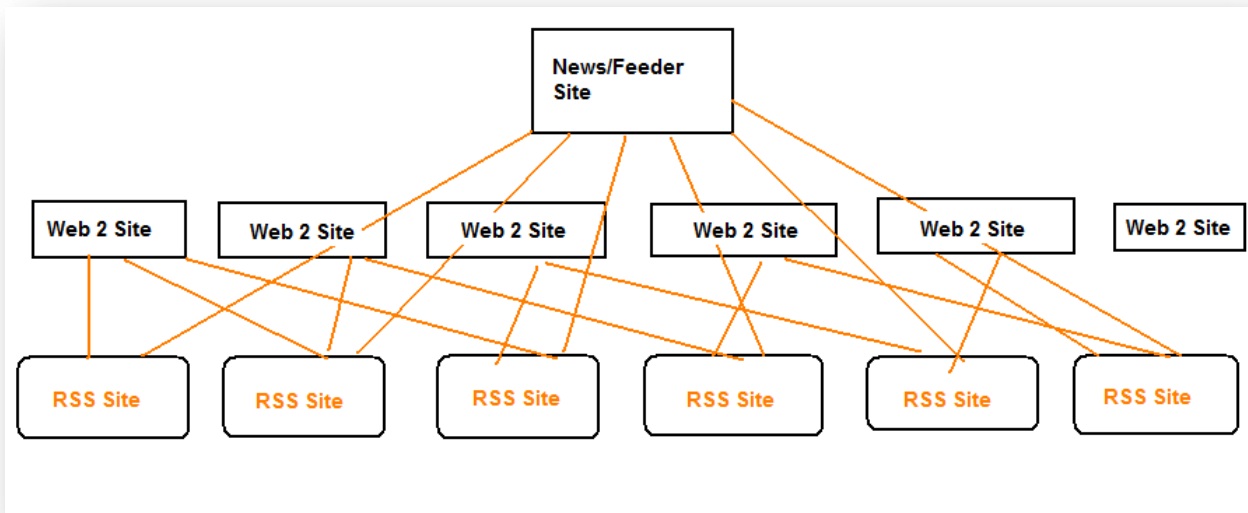

What I’m speaking about here is using a mixture of your own “link feeder” sites (mainly web 2.0 properties) and power of RSS feeds and RSS Aggregator sites.

This is an extremely powerful strategy –that yes, does take a bit of time to set up, but when you’ve got it set up, you’ve got a whole distribution network to syndicate your links to.

It may seem complicated now but it will become abundantly clear in just a moment.

Get more training and SEO tools at the [RankBuilder Blog](#)

Here's the basic process broke down in diagram form.

And here's what you need to make this work:

- 9 accounts at some web 2.0 / social web properties
- A tool to submit your RSS feeds to the top RSS feed aggregator sites. The next step is optional...

One general topic, news based sort of site that you will post to once or twice a week, that is in good standing with Google and that Google's bot crawls frequently.

This is site set up using Wordpress except unlike web 2.0 properties; these sites are hosted on your own web host. You have full control over them because you own them.

Get more training and SEO tools at the [RankBuilder Blog](#)

These kind of sites are not niche-specific, but rather more general. It should be seen more like a newspaper (sports, technology, etc) so you can post content to them for any niche you're in.

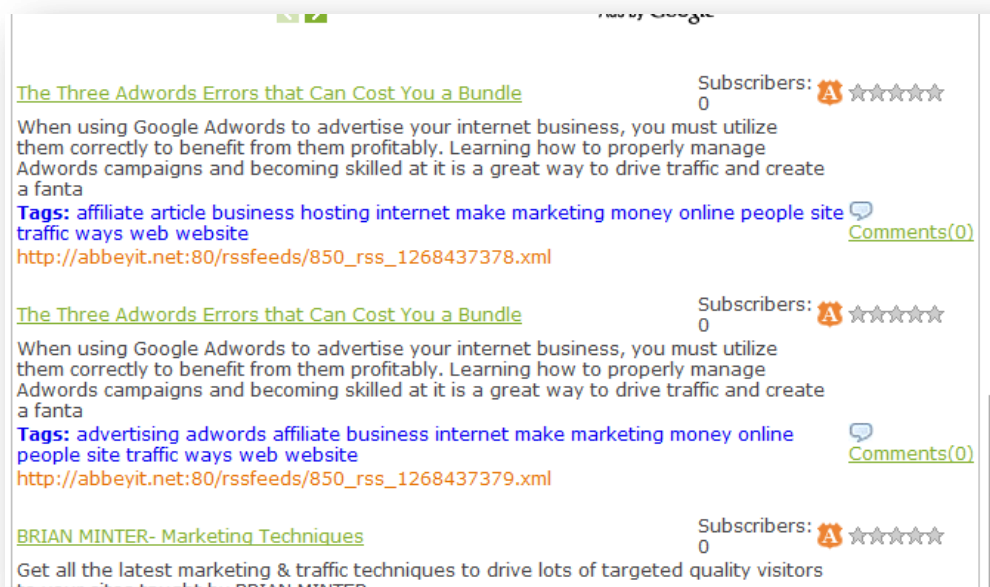

Whether you decide to just use web 2.0 sites, or build your own Wordpress-based feeder site, the process from here forward is exactly the same for both.

We're going to cover in detail how to build a link distribution network with web 2.0 / social sites.

## How it works

- You have 9 sites to which you can easily submit content with in-content, anchor text links.
- These 9 sites each have RSS feeds, so every time you submit new content to them, each properties' RSS feed is automatically updated with the new content.

The 10 RSS Feeds are submitted to all of the top RSS aggregator sites. Basically what these aggregator sites do is take your RSS feed and display all the content in your feed in a list on their site, with links back to each piece of content like this:

Get more training and SEO tools at the [RankBuilder Blog](#)

Now every time you update content on any of your network's sites, your feed is updated, and since your feed is submitted to all of the RSS aggregator sites like FeedAge from before, your feeds get updated across all those site *automatically*—any time you simply add new content.

Of course this content is going to have keyword-rich, anchor text links in it linking to another site of yours that you want to get indexed and/or drive some quick link juice to.

So let's say for example, you have one feed from one of your feeder sites submitted to 50 different RSS aggregator sites. The second you publish a new post on your site, your site's feed will obviously update displaying the latest content.

This also updates the feed listings on all 50 of those RSS aggregator sites. This instantly gives you 50 backlinks to your new piece of content *automatically*...

What if you had 10 sites like this, each submitted to 50 RSS aggregators. Now let's say you have a new site that you want to get indexed quickly. You simply make a post on all 10 of your sites that links back to your new site (that you want indexed) with keyword-rich anchor text in the content.

That means as you've updated 10 feeds that are each spread across 50 RSS aggregators, you've now got a huge number of automatic backlinks that point to your new content. Your new content points to your new site. Since the link to your new site is do-follow, a lot of that link juice is even transferred to your new site.

So you not only get indexed quickly, but you get a ton of automatic backlinks to any new site nearly without having to lift a finger. The RSS feeds do all the work for you.

Get more training and SEO tools at the [RankBuilder Blog](#)

First thing we need to do is go to Ping.fm and create an account. We'll use Ping.fm to distribute content to our network. It's a single platform that allows you to publish content to several web 2.0 sites.

After you've registered your account there, now it's time to setup our distribution network.

## Step 1: Register for the 9 sites

First you need to signup to following 9 sites. You can use the same username / password for all sites for convenience:

Facebook(PR9) <http://www.facebook.com>

Tumblr(PR7) <http://www.tumblr.com>

Blogger(PR 7) <https://www.blogger.com/start>

Livejournal(PR 8) <https://www.livejournal.com/create.bml>

Hi 5(PR7) <http://hi5.com/friend/displayHomePage.do>

Xanga(PR7) <http://www.xanga.com/register.aspx>

Wordpress(PR 9) <http://en.wordpress.com/signup>

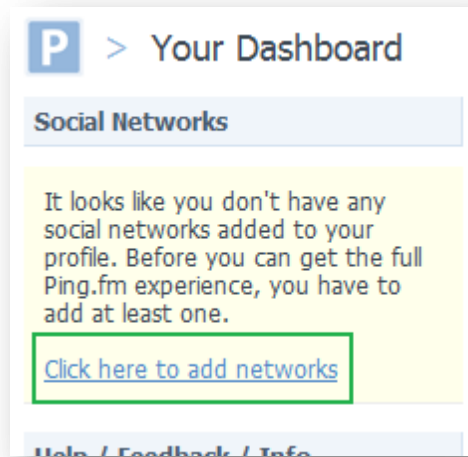

Multiply <http://multiply.com/user/join>

Vox <http://www.vox.com/register/>

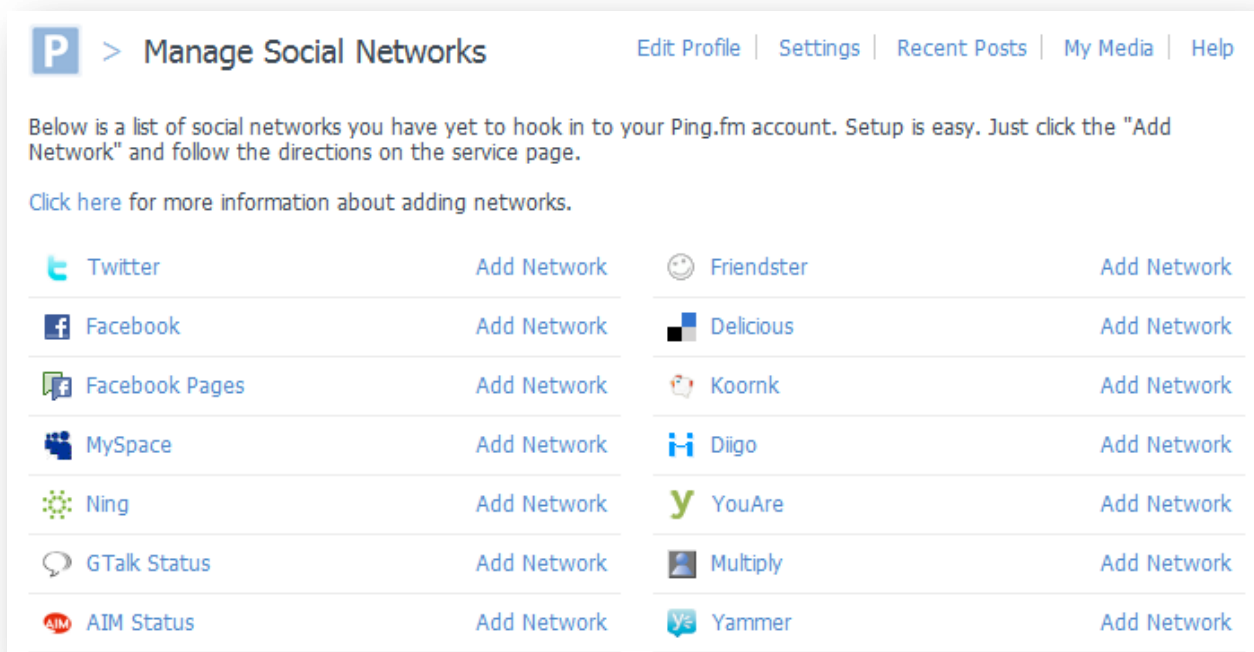

Get more training and SEO tools at the [RankBuilder Blog](#)

Once we have created the accounts we will add them to our Ping.fm account.

Do this by logging into your dashboard and following the “add” link on the left side:

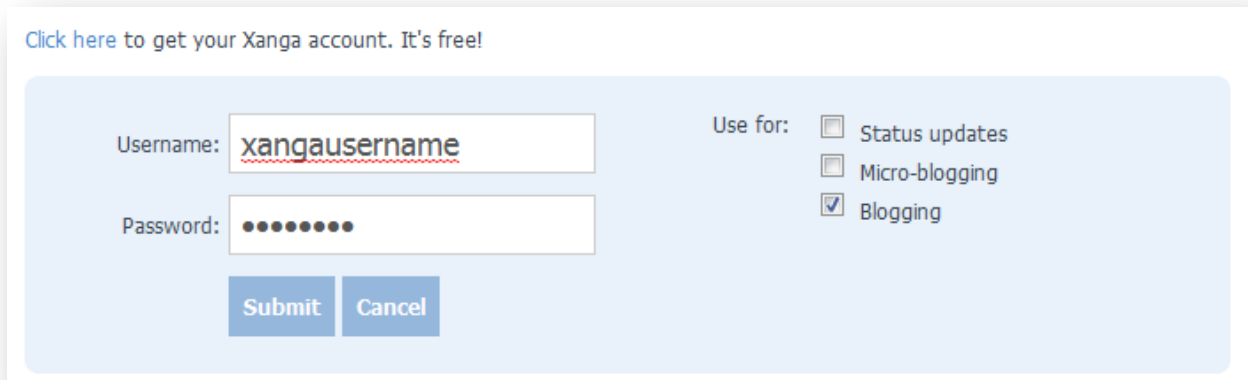

You'll come to a page that looks like this that will allow you to add your accounts for each of the nine web 2.0 / social networking sites:

Get more training and SEO tools at the [RankBuilder Blog](#)

When setting up the accounts. Don't select Status updates this will strip anchor text. All sites that use status updates will not give back links.

Also Micro-blogging is not of interest. You must select Blogging when creating the account profiles, here's an example:

Click [here](#) to get your Xanga account. It's free!

Username:

Password:

Use for:

- Status updates
- Micro-blogging
- Blogging

## Step 2: Create Your Posting Groups

Now we need to create Posting Groups. If you don't create posting groups you will end up with 9 sites that all have exactly the same content on them. Google will not like this. So this allows us to have a distribution network that appears as natural as possible.

We recommend creating 4 Posting Groups with 2 sites each (one will have 3).

To create the groups, select the method as Blogging, then select the websites to be assigned to that group.

Get more training and SEO tools at the [RankBuilder Blog](#)

You will find the place to add posting groups on the “posting groups” page that looks like this:

**P** > Posting Groups [Edit Profile](#) | [Settings](#) | [Recent Posts](#) | [My Media](#) | [Help](#)

[Service Settings](#) [Default Settings](#) **Posting Groups**

Set up posting groups to make shortcuts for posting to your social networks. [Click here](#) to learn everything you need about posting groups.

\* Method:  ▼

\* Group:

Groups can only be 1 to 16 letters. No numbers or punctuation.

[Add Posting Group](#)

Once you’ve created 4 posting groups, each with 2 sites in them (and one with 3), then you’re set up and ready to go.

### Step 3: Distribute Your Links

Now we can start distributing our links we need by posting some content with our anchor text in the content. We can include 2-3 anchor texts in the content and get several deep links to our sites.

To do this:

1. Navigate back to your dashboard, where you will find the box to distribute content to your groups.

Ping My: #groupone Create Group

Type Your Message Below:

Content Title here...

Main content with `<a href="yoursite.com">Anchor Text Link</a>` here. You can add more than one anchor text link to your post if necessary.

This will be posted to all of the sites in #groupone.

Go ahead, post a link. We'll convert it to a short link before posting to your services. (posting tips)

Ping it!

2. Select the group (in green).

Ping My: #groupone Create Group

Type Your Message Below:

Content Title here...

Main content with `<a href="yoursite.com">Anchor Text Link</a>` here. You can add more than one anchor text link to your post if necessary.

This will be posted to all of the sites in #groupone.

Go ahead, post a link. We'll convert it to a short link before posting to your services. (posting tips)

Ping it!

3. Paste Content (in blue). Use standard anchor text within the content. Contextual links.
4. Enter a title (in red). Once published (by pressing ping it!

Get more training and SEO tools at the [RankBuilder Blog](#)

in orange) it will be distributed to the sites in the group, and we have instant links.

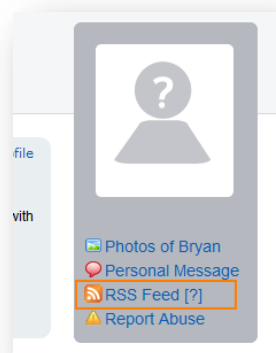

Okay, now that you've got that set up, you've now got a mini-network to which you can distribute links to all your new sites and important content –I'm going to show you how can we make this 100x more powerful?

## RSS Link Syndication

Let's take it a step further, using the Power of RSS feeds. This will literally put your linking on steroids. Multiplying your efforts. This is exactly what we spoke about before.

So first you need to grab each of the RSS feeds from each of the nine social network accounts you set up. Each of these accounts will have an RSS feed attached to them.

You will usually find them on the main page of your account some fairly obvious others not. For example if you create your account at Multiply.com –right on your main profile page you will see a box like this:

Get more training and SEO tools at the [RankBuilder Blog](#)

There in orange is the address to your RSS feed for your Multiply account. Simply right click then choose to "copy link location/address/URL" (depends what browser you use) The URL of the RSS feed will then be copied to your clipboard. Open notepad and paste the URL into it.

Repeat this process until you have the RSS/feed URL for all 9 of your accounts.

Once you've the RSS feed URL's for all of your accounts, it's time to submit them to several of the top Aggregator sites.

You could do this by hand, but it would take forever. In order to automate the process of submitting all of your RSS feed to these aggregators, we recommend you use a fairly inexpensive piece of software.

It's called RSSBot and you can get here:

[www.incansoft.com/ISoo12.php](http://www.incansoft.com/ISoo12.php)

*Note: RankBuilder completely automates the process of submitting your sites to the RSS directory - building hundreds of links on autopilot...*

Get more training and SEO tools at the [RankBuilder Blog](#)

To set up RSSBot to do submissions, simply enter the following for each feed (one at a time):

*Feed URL*

*Title*

*Keywords*

*Description*

Once you've done that, you can start submitting your feeds to these Aggregator sites with RSSBot.

The process is automatic, RSS does all the work of submitting your feeds for you.

Once you've finished submitting all 9 of your RSS feeds with RSSBot, your feed contents for each individual site will be displaying on it's own page -on all of the RSS Aggregator sites you submitted them to.

## Advanced Feed Combinations

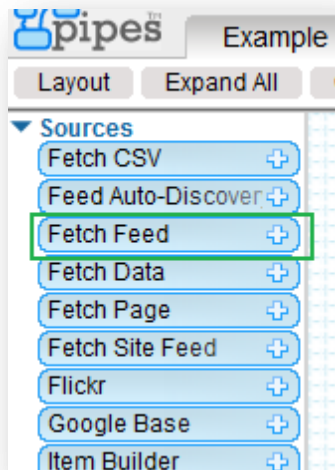

There are some advanced ways we can combine the feeds together and make unique feeds that we can then submit yet again.

You're going to use Yahoo Pipes to combine the RSS feeds of your network sites into several new RSS Feeds. All the RSS feeds you create using Yahoo Pipes, serve as an additional RSS feed to submit with RSSBot.

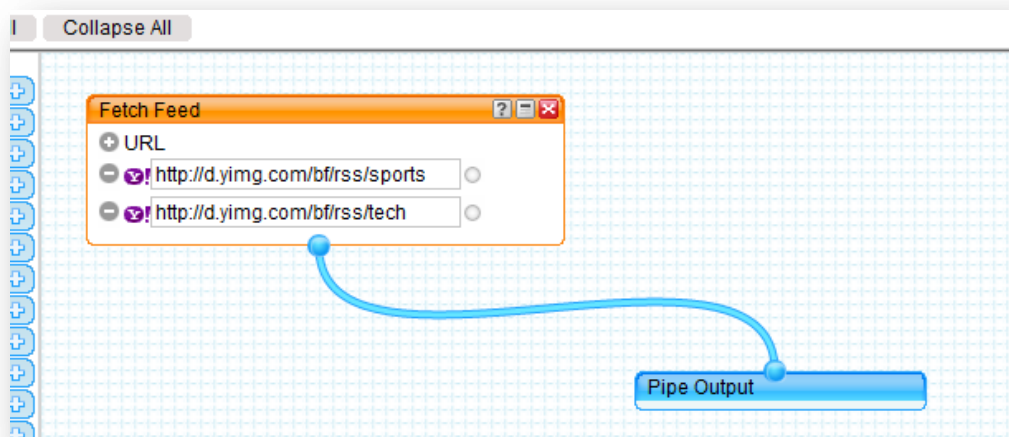

Get more training and SEO tools at the [RankBuilder Blog](#)

1. Go to Yahoo Pipes: <http://pipes.yahoo.com/pipes/> and select “create a pipe” – you need a yahoo account to login. If you don’t have one, create one.

2. Once you login you’ll see options along the left side. Choose the “fetch feeds” option:

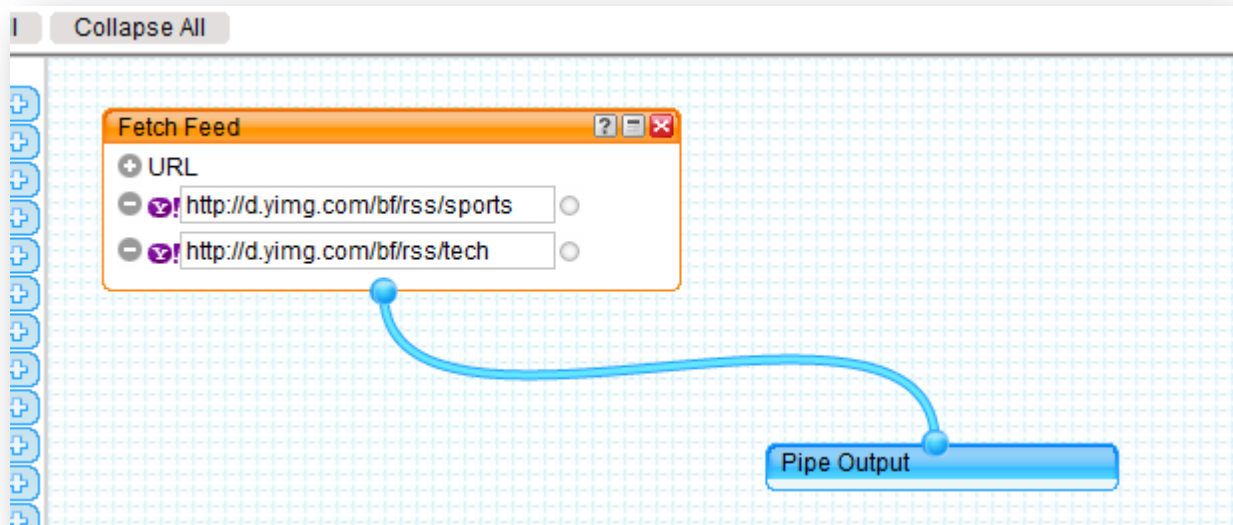

3. Drag it into the main “pipe” creation area then start adding your RSS feeds you want to combine. For this example I just chose two RSS feeds from Yahoo! News (sports and tech):

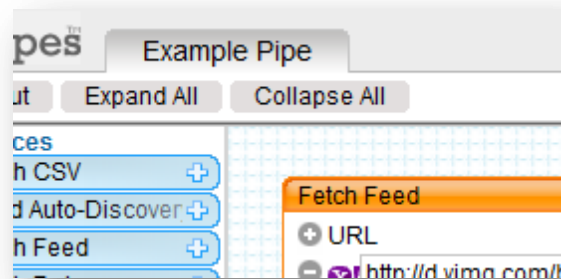

Get more training and SEO tools at the [RankBuilder Blog](#)

4. Connect the "Fetch Feed" module to the "Pipe Output" module simply by dragging from connecting dot on the bottom of the "Fetch Feed" module to the top connecting dot on the top of the "Pipe Output" module.

5. Now name your newly created feed by double clicking on the tab near the top and renaming it:

You can see I renamed this one "Example Pipe".

Get more training and SEO tools at the [RankBuilder Blog](#)

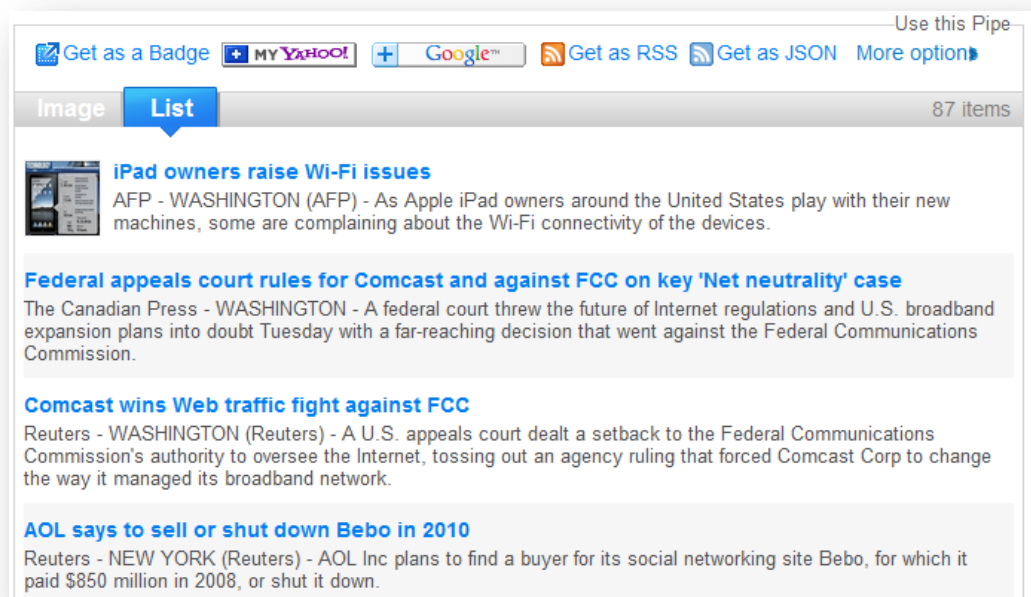

6. Save your new “pipe” by clicking the save button near the top right corner here:

7. Now that you’ve saved your new pipe you can see how it looks by click the “run pipe” link in the top middle of your screen:

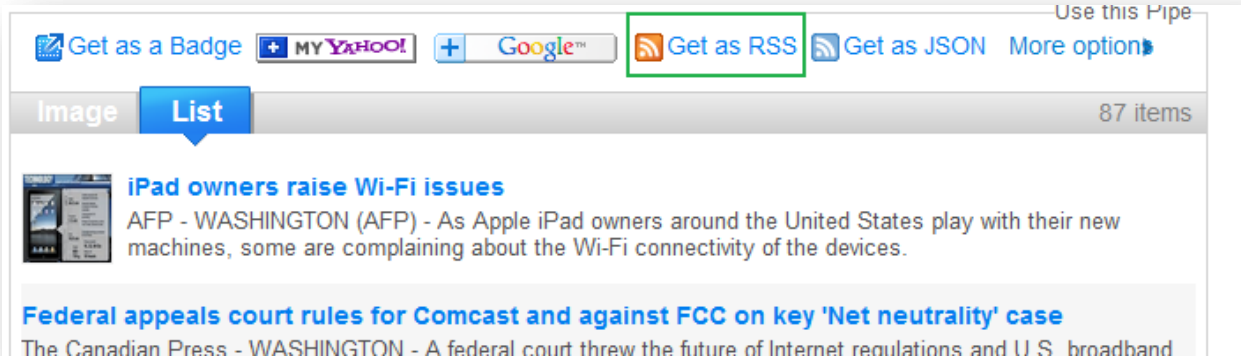

You’ll be taken to a page on yahoo that looks something like this (except it will have all the items in the feeds you combined):

Get more training and SEO tools at the [RankBuilder Blog](#)

7. If it looks good grab the new RSS feed URL for your newly combined feed. You can get this from the "Get an RSS" link right near the top of your feed output:

8. Simply click on that link and grab the URL (select, right click, copy) from the address bar in your browser:

That's your new RSS feed URL. Save that in your notepad file with the rest of your RSS feed URL's. You may also want to make a reference of what exactly the combination of the feed is for that particular URL.

## Different Ways of Combining Feeds

There is no absolutely right or wrong way, be it the number of feeds, or which feeds you combine. Here are some ideas of new feeds you could create with Yahoo Pipes.

- A combination of all of your site's RSS Feeds as one new feed.
- Half of your sites RSS feeds combined as one, and the other half combined as one (meaning 2 differently combined feeds in total).
- Combine your site's feeds in groups of two or three

You can even take that to the next level, and combine 2 already combined feeds as one.

Try different combinations and create 5-10 new, combined feeds using Yahoo! Pipes, and save the feed URL's in your notepad document.

Then obviously the next step is, to take those new feed URL's and submit them to the feed aggregators with RSSBot just as you did with your original feeds.

What you've just done in a span of maybe 30 minutes work is multiply the number of feeds and backlinks you'll be getting to any new content you distribute to your network. Now that's some seriously powerful stuff that you can do quickly and easily.

Imagine then submitting a new piece of content to your distribution network that contains a link. That content will be crawled within mere minutes (usually) and the site you're linking to will be crawled and indexed at the same time.

Get more training and SEO tools at the [RankBuilder Blog](#)

Not to mention, the benefit of all the links the RSS aggregators automatically built to that content (the link juice) will pass through the content to the site you've linked to.

Now that you know this process, the possibilities are endless. There are literally thousands more of these web 2.0 types of sites that you can create accounts with and get a feed associated to your account.

In the RankBuilder Link Database, I've provided you with several more of these site. Use this database wisely..

---

## The End Result

---

Every time you want to get a site indexed, or drive links to a particular site, simply submit content to a portion your network's properties. Make sure the content has in-content, relevant anchor text links to your target site.

Every time you submit a piece of content to your network, it will automatically be distributed across all of the RSS Aggregation sites.

From your original feed to the feed aggregators, from your combined feeds to the feed aggregators, and finally think about this possibility...

There are others out there that are auto-blogging, populating blogs using feeds from these feed aggregators. So your content could and will likely get picked up and posted across potentially hundreds of other websites. Most of those sites linking back to your site.

Get more training and SEO tools at the [RankBuilder Blog](#)

The multiplier effect here is nearly endless. And this all happens nearly on auto-pilot, just by posting a simple piece of content to your distribution network ONCE.

Once you get this up and running, it's extremely easy to get nearly any site or page ranked and 100% free traffic flowing to it.

# Conclusion

---

I hope you've enjoyed the Instant Ranking Formula report. This is a strategy that you can quickly and easily implement and be building hundreds of backlinks on near auto-pilots.

If you have any questions or comments, please leave them on the RankBuilder Blog:

<http://rankbuilder.com/blog>

I want to hear from you, and I'll try to answer as many as I can.

Thanks for reading... and don't forget to check the blog and your email for more good stuff coming, including the Case Study that shows how I took a site from 3-4 hits a day to over 20K a month.

This is perfect if you want to start building niche sites that dominate.

Thanks,

Alex Goad
